

KorankAI

KORANK · AI — THE OPERATING SYSTEM FOR INDIA'S SCHOOLS

India.

What's inside

01	The Problem A childhood, tracked by hand.	03
02	The System One login. One record. One brain.	04
03	Vision & Mission The reason we build.	05
04	Our Promise Service first, always.	06
05	Schools The whole school, in one login.	07
06	Why Korank Wins Everyone else sells you a piece.	09
07	The Network One school, fully connected.	10
08	Impact Its own brain, everywhere.	11
09	In Closing The intelligence layer beneath.	12

The whole of a childhood, tracked by hand.

The years that shape a child the most are the ones we measure the least — attendance, marks and progress copied on paper, term after term, and the ones who fall behind are noticed far too late.

WHAT IT LOOKS LIKE TODAY

01 Teachers

Forty paper registers — attendance, marks, remarks — re-copied by hand every single term.

03 Parents

Kept in the dark — a diary note, a missed call, and a report card once a term.

05 Sports & events

Leagues, fests and olympiads run on WhatsApp groups, printouts and memory.

02 Students

No single record. A skill, a certificate, a project — lost in the gap between one year and the next.

04 Administrators

Attendance, fees and report cards assembled by hand — every single term.

06 Between years

A child's record lost the moment they change a class, a teacher or a school.

None of this is a technology problem anymore. It is the absence of a single system.

One login. One record. One brain behind it all.

Korank is an **agentic ERP for education** — one connected system where the same student, the same fee, the same result flows through every module without ever being re-entered. Not a portal bolted onto a school. Not an ERP with a chatbot stapled on.

Multiple AI agents — students, faculty, administrators, wellbeing, analytics and code — carry the work a human would otherwise key in by hand. Thirty-five modules today, shaped around how each institution actually runs.

Vision and Mission

Great institutions, held back by clerical work. We change that.

OUR MISSION

Talent is spread evenly across India — opportunity is not. A child in a village school works just as hard as one in a city school, but rarely gets the same start. Our mission is to transform every school with advanced, agentic AI — so a child's future is decided by their ability, not their address.

OUR VISION

One intelligence layer beneath education itself. As institutions join, Korank learns the patterns that link a classroom in one district to a classroom in another, and connects them into a single national network where opportunity moves freely.

WHERE WE START

Karnataka. Thousands of schools, most still run on registers and spreadsheets. The right place to prove that better infrastructure changes outcomes, not just admin.

You come first, and your data stays yours

The relationship is the product, as much as the software.

01

Service is the priority

Hands-on onboarding, full data migration and a dedicated point of contact. We co-build the rollout with your team and stay responsive long after go-live. Not a ticket number, a partner.

02

The value we provide

One system replaces a dozen. Up to **75% of routine admin work** disappears, freeing faculty and staff to spend their hours on students, not registers.

03

You own your data

Your data stays yours. Role-based access, encryption in transit and at rest, and a firm line we never cross: we do not sell or share student information.

04

Privacy by design

Built to comply with India's DPDP Act 2023 and education-data norms, with consent, retention and audit controls for handling minors' data responsibly.

Schools

35
MODULES

The whole school, in one login.

THE PROBLEM TODAY

A school runs on a hundred small things: attendance taken, a diary updated, a fee reminded, a worried parent answered. Spread across registers and apps, the child who is quietly slipping goes unnoticed for weeks.

HOW KORANK HELPS

Korank handles every one of those tasks in one login, keeps parents in the loop automatically, and quietly watches the patterns — flagging the at-risk child six to eight weeks before anyone else would notice.

A Academics & classroom · 6 modules

Smart attendance

Face or smart check-in with auto reports and absence alerts.

Syllabus tracking

Plan, pace and track curriculum coverage class by class, live.

Examinations

Scheduling, marks entry, grade cards and result analytics.

Daily diary & homework

Assignments and remarks synced to parent and student apps.

24/7 AI doubt bot

Explains topics and escalates to faculty when needed.

AI grading assistant

Automated submission analysis with grades and class summaries.

B Operations & ERP · 9 modules

Admissions

Enquiry to enrolment: forms, documents, approvals, onboarding.

Accounts & finance

Ledgers, payroll inputs and finance reporting, consolidated.

Timetable

AI allocation by availability and room, conflicts auto-resolved.

Point of sale & HR

Uniforms, books, stock and billing; staff records and payroll.

Student profiles

One living record: academics, attendance, health and history.

Fee management

Structures, online payments, reminders and reconciliation.

Library

Catalogue, issue and return, fines and reading analytics.

C Administration & analytics · 4

Principal's dashboard

The whole school on one screen: academics, fees, attendance.

Live analytics

Class, section and grade trends surfaced in real time.

Custom reports

Any metric, any period, ready to share in a click.

Notices & scheduling

Announcements and events pushed school-wide instantly.

E Wellbeing & early warning · 3

Early-warning alerts

Patterns preceding failure detected 6–8 weeks ahead.

Wellness check-ins

AI micro-surveys flag mental-health signals to counsellors.

Behaviour tracking

Merits, incidents and trends: a fair, longitudinal view of each child.

F Beyond the classroom & HR · 11 modules

Inter-school sports & fests

Fixtures, live brackets and cultural events across a district.

Young innovators incubator

Seed student ideas with mentors, micro-grants and showcase days.

HR & hiring automation

Recruitment, payroll, leave, appraisals and staff workload.

D Family & communication · 5

Parent & student apps

Attendance, homework, fees, results and notices in one pocket.

PTM scheduling

Slot booking, reminders and notes for parent-teacher meetings.

Comms automation

AI-generated, personalised parent updates at set intervals.

Notices & circulars

Targeted announcements to classes, sections or the whole school.

Complaint desk

Logged, routed and tracked to resolution with full visibility.

Hackathons & olympiads

Junior build sprints and proctored competitions across schools.

Achievement tracking

Verified badges and portfolios that follow each student onward.

Staff performance

360-degree feedback and KPI tracking across the institution.

Everyone else sells you a piece.

An ERP here, a placement portal there, an LMS, a chatbot — none of them talk. The institution is left to be the integration layer. We are the whole system.

01 One connected system

The same student, the same fee, the same result flows through every module without being re-entered. Not modules stapled together.

02 One system, every year

From a child's first class to their last, on one spine — a record that follows them across every year, teacher and school. No one else spans it.

03 Agentic, not just dashboards

Multiple AI agents do the repetitive work a human would key in by hand — the software runs the workflow, it does not just display it.

04 Runs where schools are

No IT team, no server room, no consultant — Korank runs on the devices a school already has.

One school, fully connected.

Every classroom runs its own way. Korank runs the whole school.

Every student, classroom and teacher on one spine — and every school plugged into a shared network, so a child’s record follows them from class to class and school to school. That connective tissue does not exist anywhere else. It is why Korank compounds.

When every school runs on its own brain.

Give every school its own intelligence — and give the country, for the first time, a standard.

A record that follows a child

From the first day of school to the last, a child's achievements travel with them — no year, no move, no school loses them.

Teachers returned to teaching

The eighteen hours a week disappear. The people trusted to teach are freed from the paperwork they were buried under.

Opportunity that moves

Skills, placements and scholarships reach students across the whole network — not just the ones at the richest campus.

A country with a standard

For the first time every school speaks one language — measurable, comparable, and finally improvable at national scale.

We are not digitising paperwork. We are building the intelligence layer beneath Indian education.

Every institution in the country runs on tools that were never built for it. We are replacing all of them with one system — and connecting them into one network. If that is the future you want to build, we should talk.
